DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-4, 8-10, and 15, drawn to a substrate processing method, classified in class 216, subclass 67.
 - II. Claims 5, 6, 11-13, and 16-19, drawn to a substrate processing apparatus, classified in class 156, subclass 345.43.
 - III. Claims 7, 14, and 20, drawn to a plate used in a substrate processing apparatus, classified in class 156, subclass 345.33.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II/III are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the apparatus as claimed can be used to practice another and materially different process, for example, a deposition process - PECVD.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
4. Inventions II and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the

subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination (AB_{Br} – Claim 5) as claimed does not require the particulars of the subcombination (B_{Sp} – Claim 7) as claimed because the combination only requires “a plate placed over said substrate” while the subcombination specifically requires “said plate placed to cover the surface of said substrate”. The subcombination has separate utility such as a baffle plate intermediate between the substrate processing surface and a gas delivery apparatus upstream therefrom.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

6. A telephone call was made to Lawrence J. McClure on April 21, 2005 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
